Source: EPB Research

### Bad news for the economy is good news for stocks

Signs that growth and inflation might be moderating helped stocks rally sharply over the week, lifting the S&P 500 out of bear market territory. With the exception of energy, all sectors in the index recorded strong gains. Several economic data signaled that the Fed's monetary tightening was having the intended effect of slowing the US economy and moderating inflation. E.g. US home sales fell to their lowest level in May since June 2020, the S&P Global's index of June manufacturing activity came in well below forecasts (52.4 versus roughly 56) while the University of Michigan's of June consumer sentiment was revised down to 50.0, its lowest level in records dating back over four decades. On Wednesday and Thursday, Fed Chair Powell testified before Congress that inflation expectations appeared to remain anchored. His comments, along with the weaker-thanexpected economic readings, briefly pushed the yield on the benchmark 10-year Treasury note near 3.0%, down significantly from the previous week's peak of nearly 3.5%. Shares in Europe snapped three weeks of losses as signs that the economy is slowing cast doubt on whether central banks would seek to increase interest rates aggressively. Chinese stock markets advanced on stimulus hopes after President Xi Jinping pledged to roll out more measures to support the economy and minimize the impact of COVID-19. Cryptos have moved sharply higher, with bitcoin +20% and eth +40% from last Saturday's lows.

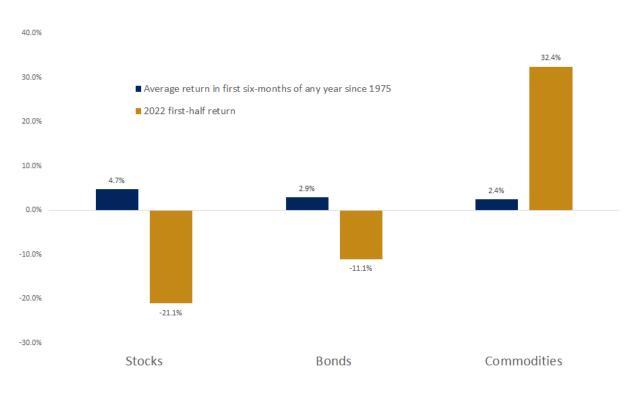

#### 25 JUNE 2022

### #cross-assets #h1 #performance

With just a few days away from the end of June, stocks gained some ground last week but remain down nearly 20%, their worst first six months of any year since 19701. Aggressive central-bank tightening, concerns around inflation, and the effect of these two factors on growth have led to a rapid adjustment in interest rates, valuations, and sentiment.

#### 25 JUNE 2022

### #us #equities #quarterly #performance

The chart below shows the QTD performance of the S&P 500 in Q1 versus Q2 of this year. In both quarters, the market started out with fleeting gains that quickly turned into steep losses with little relief throughout the quarter. The only relief in Q1 came in the second half of March when the S&P 500 rallied 11% off its lows in eleven trading days. This time around, the late quarter rally took longer to materialize, but in the five trading days since last Thursday's (6/16) close, the S&P 500 has rallied 6% with another four trading days left to go.

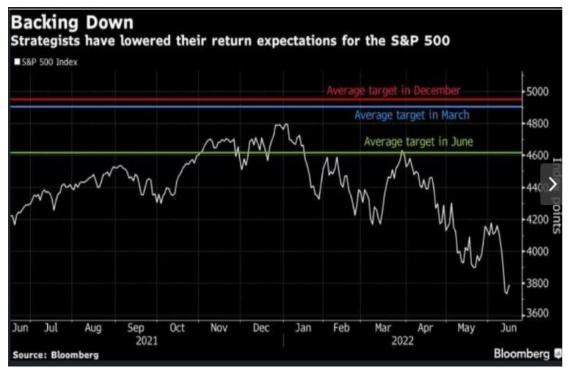

Hand-curated selection of the best charts & news flow

25 JUNE 2022

## #sp500 #target

Back in December, strategists predicted the S&P 500 would gain 5% in 2022. Six months later The S&P 500 is down 23%. Oppenheimer still sees the S&P 500 ending 2022 at 5,330 points, requiring a 45% rally in the next six months. JP Morgan and CS have targets that require the index to rally at least 30% to be met. Wall Street strategists, on average, see the S&P 500 gaining 22%.

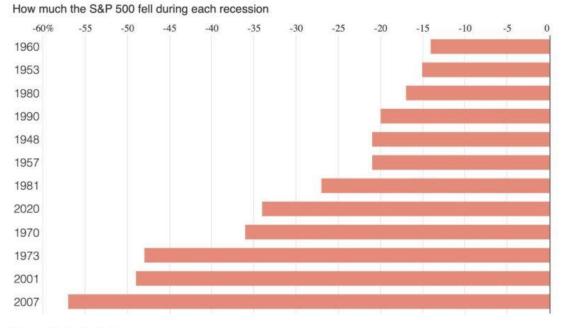

Source: Bloomberg

# #sp500 #recession #performance

The median drawdown for the S&P 500 during a recession is 24%, which is the equivalent of the current decline of the main US equity benchmark since January peak, i.e markets are already pricing in the risk of a recession - at least to a certain extent.

Stocks have fallen a median of 24% in recessions since World War II. That makes stocks' current declines--happening in the absence of a recession--look particularly deep.

#### 25 JUNE 2022

### **#us #equities #valuations**

A breakdown of the market return into two components -- 1) change in valuations, and 2) change in corporate earnings -- reveals that this year's decline in stocks has so far been exclusively driven by a decline in valuations, with corporate earnings growth acting as a partial offset. Specifically, the S&P 500 price-to-earnings ratio has fallen 26% (from 21.3 to 15.7), while forward earnings have risen by 6%2. For perspective, in the past five Fed-tightening cycles since 1985, valuations declined 20%

### **#ruble**

The Russian ruble just hit a 7-year high against dollar. That took its advance to 35%, a world-beating gain that has continued unabated even after Russian policymakers lowered the benchmark rate by 1,050 basis points and relayed capital controls imposed in response to Western sanctions.

While that helped Russia avoiding a forex crisis, it became a worry for the central bank as it undercut export revenues in local-currency terms and made the country's goods more expensive abroad. The central bank responded with a flurry of easing measures.

## **#swissmade**

Toblerone maker Mondelez will shift some production of its triangular chocolate bars to Slovakia from Switzerland at the end of next year, losing the "Swiss" attribute on its packaging in the process. Toblerone was first launched in 1908 and has been exclusively produced in Switzerland since the early 1990s. Under strict Swiss labelling rules, chocolate made abroad cannot be called "Swiss", and Mondelez will thus have to remove this reference.

## #global #real-estate

History is repeating.. just different country. At one point of time in 1988.. land under imperial palace of Japan was valued more than the entire California real estate. Australia (to slightly lesser extent Canada) is now reaching a point of no return. Those (Central bankers) who fail to learn from history are doomed to repeat it.

## **#us #rents**

Single-family rent growth in the US surged 14% year-over-year in April, according to real estate research firm CoreLogic. The supply-demand mismatch continues to drive rents higher, as many parts of the country print double-digit jumps in monthly rent prices. Among large cities, Miami recorded a stunning 41% increase in single-family rent growth for April. It was the most significant increase in April rent across all major metro areas CoreLogic tracks.

## #diabete

A new survey finds that the cost of insulin is driving many diabetic Americans to go into debt, forcing them to ration medication as they struggle to pay for other living expenses. The survey, conducted by CharityRX, found that 79% of respondents said insulin costs had created financial difficulty for them personally, or for those in their care - both with and
